

Asphalt Shingles: Types, Testing and Compliance

Description: This course explains the basics of shingle types and construction, roof terminology, and testing for compliance with applicable codes. The course also covers specific code requirements, code referenced standards and related test protocols, and proper installation. Design practices will be improved by familiarizing learners with information sources such as manufacturer design guides, web based resources, and proposed code changes.

HSW: Yes

Duration: 1.50 hour(s)

Format: PDF
